

Wedgle® Direct-Inject™ TREE INJECTION SYSTEM

Quick Start Guide

Follow these steps to make sure that your injector will operate properly. This should be done when you first receive the unit OR if the injector has not been used for several days.

1. Remove the Dust Plugs. (#18)

4. Slowly turn on the water and allow the water to run through the injector for at least 30 seconds.

2. Connect the Hose Cleaning Adapter (#11) to a garden hose or spigot.

5. While the water is running, pull back the handles several times. Turn off the water and disconnect the injector.

3. Connect the Hose Cleaning Adapter to the Inlet Quick-Connect (#48).

Proceed to "Priming the Direct-Inject QC injection unit" on Page 2.
