

**Trees are a
valuable asset
to your home**

**Tree Trunk Injection
uses less chemicals
compared to foliage
spray or soil drenching.**

**Simple and
More Effective
Tree-Care**

Treat Bark Beetles and Other Pests with Tree Trunk Injection

A well, maintained landscape that includes healthy trees enhances the quality of your home. Tree Trunk Injections are a tree-friendly way to treat trees and are people friendly too. Children and pets are not exposed to chemical spray or open chemical containers. There is no need to cover outdoor toys, play equipment, pools, furniture or vehicles.

Treatments are available for Diplodia Tip Blight, Pine Wilt Disease, Emerald Ash Borer (EAB), Anthracnose, Crabapple Leaf Disease and other pests and diseases. Tree nutrients are available to relieve symptoms of iron chlorosis, manganese deficiency and drought and transplant stress.

- The Tree Trunk Injection process injects chemicals directly into the cambial zone delivering faster results
- There is no waiting for uptake, no guarding, and no return trips during the application
- The ArborSystems Direct-Inject trunk injection method does not require drilling, preventing drilling damage, long-term wounding and wasted tree energy.
